March 8, 2010

Written Plan for Aerial Herbicide Application

Resource Concerns: Hawley Creek tributaries and small streams assumed to have fish. During the aerial application, all streams will be well flagged with a 60 foot buffer. The main area where this is a concern is in the south part of unit E and the SW part of the Baldy 1 unit. To mitigate this, the helicopter will fly parallel to the flagged buffer and use the half boom method. The wind direction and velocity will be monitored during the operation as well to ensure the buffered areas will be protected.

Units A,B,C: 25 oz. Forestry Garlon xrt per acre, 1qt Hasten, 3oz. oust per acre. These three units have fir growing in them and are doing well. This should take care of the scotch broom and grasses that are competed with them and no other applications should be needed in the future.

Unit D: No application at this time, there is a lot of scotch broom but the trees seem to be above it and free to grow, although we will monitor it to see if it needs future applications.

Unit E: Velpar 2.67 lbs. per acre. This unit has a mix of fir, pine and incense cedar throughout with the pine and incense cedar typically down low. We are targeting only the grasses in this area as the scotch broom hasn't really taken hold yet, there is a high mortality rate in this area from vols which we are hoping will go down significantly if the grasses are taken care of.

Baldy 1 Unit: Forestry Garlon xrt 31oz.per acre, 1.5 Hasten per acre. This unit has no trees in it except in the NW corner.

Units F,G: Handspray 1% Forestry Garlon xrt+1% Hasten for Scotch Broom (Spot spray)

1lb Atrazine+8oz. Transline Grasses, Thistle (Waving wand)

These units are mostly incense cedar and pine

Kurt Spingtath came out today and is writing a prescription with more detail, I can fax it to you as soon as I get it, if you have any questions for him his number is 503-781-5266.

Sincerely,

Derek S. Martin
