

**Written Plan for herbicide use within 100' of small type "F" stream**

**Landowner:** Whitewater Forests LLC  
39074 Easton Lane  
Springfield, OR 97478  
Phone: (541) 285 3288

**Notification #:** New notification

**Project:** Penn Road unit hack-n-squirt

**Legal Des:** 18S 7W Section 3 S1/2 SW1/4

**Protected resource and reason for written plan:** Planned herbicide treatment to kill individual undesirable hardwood trees to improve growth and stand conditions in conifer stand. A portion of the treatment area lies within 100' of small type "F" tributary of Wildcat Creek.

**Description of area and activity:** Treat lightly scattered hardwoods within 60 acre stand of 15-25 year old Douglas fir. Chemical used will be Arsenol mixed with water per labeled instructions, injected into machete chops on individual targeted stems. The ground slope is flat to moderate and all work will be easily done with hand labor.

**Planned resource protection measures:** There will be no treatment or chemical application within the flagged 20' RMA buffer. Our management plan recognizes hardwood component as a desired element in streamside habitat. Chemicals will be stored, handled, mixed, applied and containers disposed of in compliance with the Oregon FPA rules and instructions on the product label.
