Notification of Herbicide Applications

Beginning May 21, 2012, ODOT, District 5 will start the application of herbicides to the highway shoulders. Applications will start during the normal day shift. Our plan is to start on Highway 99 North between Junction City and Eugene, I-5, Beltline and I-105 making applications to the outside shoulders and ramps and connecting highways such as 99 South, Cloverdale, Parkway and the lower end of Highway 58. I expect this to take up to 3 to 4 weeks.

Upon completion of the above areas, we plan to finish the Glenwood Section inside shoulders, and ramps and continue applications to Highway 126E and finish the upper end of Highway 58, working night shifts. We will finish up our shoulder program on Highways 126W and Territorial Highway.

There will be no residual shoulder spraying done on Highways 101 and 36. Only spot spray applications to noxious weeds will be allowed on these highways. Notification of applications on Highway 36 will be at least two weeks prior to any applications.

Spot spray applications to noxious weeds will be happening around the District. Please call the ODOT Herbicide Application line for up-to-date information.

The herbicide application schedule is tentative and is subject to change at any time. For daily information call the ODOT Herbicide Application Information Line 1-888 996-8080.

Special Note: Weather, equipment breakdowns and availability of product will determine the following of this schedule.
